GROUP B

Answer all **Four** Questions.

4x4=16

Read the under mentioned passage carefully and answer the questions that follow:

Many thoughtful people are now worried about scientific inventions, because they have become so dangerous to man that they may burn up our whole civilization. They suggest that we should call a halt to scientific research.

But it is impossible to carry out their suggestion. Science must investigate all material changes in man's world.

The aim of scientist is to study how nature may be controlled and used for the benefit of man. Progress of one kind or another cannot be hold to stand still. Nothing can stop it, and as time goes on, scientific progress is likely to proceed at an even faster rate. The problem as to how the discoveries of the scientists are to be applied to the ordinary issues of everyday life is not really a scientific problem. It is for the politicians and the people at large to decide whether or not an atom bomb or a hydrogen bomb should be dropped on a foreign country.
